Product description
This adapter is used for the removal of the vibration damper. The adapter is a ring-shaped metal piece that fits around the crankshaft vibration damper. It is used to hold the damper in place while the bolt is removed. The adapter is made of high-quality steel and is designed to last for many years. It is a simple and effective tool that is easy to use. The adapter is sold in a box with a clear plastic cover. The box contains the adapter and a silver-colored bolt. The box also contains a small instruction sheet. The adapter is a must-have for anyone who owns a VW/Audi A6/A7 with a 3.0L 6 cyl. diesel engine.
